The future of rewards intelligence lies in turning signals into strategy. With a conversational, intelligent interface, Rewards AI, paired with WTW's trusted data, helps organizations surface patterns, uncover opportunities, and navigate complexity with clarity and confidence.

The screenshot displays the WTW Rewards AI interface. At the top, it shows the WTW logo and 'Rewards AI' text. The user is identified as 'ACME Corp (User)' with a language setting of 'EN'. The main content area features a large heading 'The Future of Rewards Intelligence' and a sub-heading 'Let's Talk About Salary Budget Insights'. Below this, there are several interactive cards with questions like 'What is the expected inflation rate for the US?', 'What is the salary increase in the United Kingdom?', and 'Compare the average attrition rates between UK and US across 2024 and 2025'. A chatbot interface is overlaid on the right, showing a conversation with the user asking 'How did inflation and employee salary changes change over the last three years in the UK?' and the chatbot responding with a bar chart. Another question is visible: 'In which countries are organizations planning the highest merit increases in 2025?'. A search bar at the bottom of the chatbot asks 'How can I help you today?'. A third question is visible: 'What percentage of employees are promoted in the United States compared to Canada?'. A 'Salary Budget Planning Insights' button is also visible in the interface.
